

Quick Start Guide for **ProgressIndicator**

Version 1.0

Last update: 05/2011

I am very happy*

Thank you for using ProgressIndicator!

*I hope you are happy too.

Overview.

With this single ActionScript class you can easily add a nice preloader animation to your websites, applications, games, or widgets.

The **ProgressIndicator** class is now available in **AS2** and also in **AS3** so there are no limits with using it. You can use it with the **Flash IDE**, **FlashDevelop**, **Flex Builder** and all the other nice ActionScript editors out there.

The **AS2** version is carefully optimized for mobile devices with a low processor and memory capabilities so it is very handy to use with **FlashLite** projects.

With the great flexibility of the **ProgressIndicator** class the way of creating a new preloader animation is very simple and gives you creative freedom.

Let's start.

ActionScript 3.0 version

Classpath:

AS3\src\com\robertpataki\heartcode\

Example source:

AS3\src

Example binary:

AS3\bin

Documentation:

AS3\doc\index.html

ActionScript 2.0 version

Classpath:

AS2\src\com\robertpataki\heartcode\

Example source:

AS2\src

Example binary:

AS2\bin

Documentation:
